

Get ShakeAlert®-Powered Earthquake Alerts On Your Cell Phone

The ShakeAlert® Earthquake Early Warning (EEW) System, managed by the US Geological Survey (USGS), quickly detects significant earthquakes, estimates shaking, and issues ShakeAlert Messages to partners who deliver alerts to people and vital systems.

You can get ShakeAlert-powered alerts through your cell phone, so you can take immediate protective action, such as **DROP-COVER-HOLD ON.**

• Mobile Apps

Several ShakeAlert-powered apps are available for free download on mobile devices. Always ensure you have completed any updates to your phone's operating system. It's fine to have more than one alert method enabled.

APP NAME	AVAILABLE STATES	AVAILABLE SYSTEMS
MyShake	California, Oregon, Washington	iOS , Android
ShakeReadySD (through San Diego County Emergency App)	California	iOS , Android

• Google Android Operating System

Google uses ShakeAlert Messages to deliver alerts through the Android Operating System in Washington, Oregon, and California. No download is necessary.

• Wireless Emergency Alerts

ShakeAlert-powered alerts are sent through the Wireless Emergency Alert (WEA) System automatically through most cell phones (just like an AMBER Alert). They can reach most modern mobile devices in Washington, Oregon, and California. In addition to having ShakeAlert-powered WEA alerting enabled on your phone, you are encouraged to download mobile apps and/or use Android OS alerts.

⚠️ EMERGENCY ALERTS
Emergency Alert
Earthquake Detected!
Drop, Cover, Hold On.
Protect Yourself. -USGS
ShakeAlert
